

## **LifeWave Products, Pure Energy Patches 60-Subject Test**

By Fenestra Research

*LifeWave Patches* are a non-invasive dermal patch worn on the human body. Rotation of placement of these patches was done on a daily base. This 60- subject study was done without providing any kind of information to the subjects about the intended outcome or scope of this study. No educational material or advertisements were provided to the 60-subjects for the length of this study.

Fenestra Research performed human Clinical Trials using this all-natural dermal patch system. This study involved 60-subjects of various , age, exercise levels, race, sex, and health levels. This study was conducted for 30-days.

Upon commencement of this study each subject was provide the correct amount of patches for their test group number to be used in pairs for 30-days. Each daily placement of the patches was done in pairs on the body with the white patch being secured in place on the right side of the body first and the tan patch placed on the left side of the body second.

Subjects were advised that no changes to their daily lives should take place during this time. All subjects were instructed to make no changes to their daily food consumption in regards to the amount or the types of food they were consuming daily. No changes to the amount or type of water should be done for the length of this study. Instruction relating to water consumption were as follows; Each subject was to consume  $\frac{1}{2}$  of their weight in ounces daily of what ever source of water they usually consumed.

Upon completion of the 60-subject groups 30-day testing and intake these significant measurements were found:

1. An increase of 22.3% was measured in the lipid side of the ATP cycle of energy production.
2. 30% of subjects reported an increased since of well-being while wearing the patches.
3. Daily wear of the patches did not have any reported negative side effects or interactions for the length of this study.
4. At this time there are no significant changes to any of the other Wellness measurements being tested.
5. Patches stayed in place all day for each of the participants with the exception of use in ocean water. Patches stayed on all day through showers, sweating and daily activities.
6. No allergic reaction on or around the area of placements were seen or reported during this study.
7. Five subjects reported a weight loss of at least 6 pounds during this study.
8. 100% of these subjects tolerated the patch test well.

We find that the daily use of the *Energy Patches* by **LifeWave Products did improve the energy levels in 100% of our test subjects**. This was proven using the Fenestra Research Labs Optimal Wellness Test, described in attachments. The Energy Patches are 100% safe and effective. Days of not wearing the patches were important to the overall usage and out come of this study.
